***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to stereoscopic image display device, classified in Class 349, Subclass 15.
  - II. Claims 10-12, drawn to a manufacturing method of a liquid crystal device, classified in Class 349, Subclass 187.
2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the process of manufacturing could be employed in making a video image display apparatus (as opposed to the stereoscopic image display apparatus), and the stereoscopic image display device could be made by a lamination process, for example.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
